

THE PROBLEM

Fraud rings are built to defeat rules-based detection. Every transaction stays below alert thresholds. Flows are circular. Accounts coordinate. Individual signals look clean — but the pattern is unmistakably fraudulent.

Scenario Size	Circular Loops	Ring Accounts	Per-Transaction
250 transactions	6 coordinated loops	12 accounts	\$400 – \$900

Standard rules engines — still relied upon by thousands of community banks — are blind to this class of attack. Fraudetect AI was built to close that gap.

WHAT FRAUDETTECT AI DOES

A multi-signal reasoning agent that investigates like a senior fraud analyst — connecting graph structure, timing patterns, device signals, and behavioral drift into a single prioritized case file, delivered in under 3 minutes.

Graph Analysis	Builds a live account graph from all transactions. Identifies circular flows and connected subgraphs invisible to linear rule engines.
Timing Clusters	Clusters by time window, amount band, and account-open date — surfacing coordination across accounts that individually appear normal.
Device Intel	Cross-references hardware fingerprints to link accounts sharing devices, even when names, addresses, and IDs differ entirely.
Drift Scoring	Flags accounts dormant 60+ days before sudden high-velocity activity — statistically anomalous reactivation scored automatically.
Ranked Case File	Identifies ring members, traces loop paths, calculates total exposure, and writes the evidence chain in plain-language investigator narrative.
SAR Ready	Delivers a structured 3-minute analyst summary with one-click Fix / Flag / Escalate actions and an auto-drafted Suspicious Activity Report.

SUCCESS CRITERIA

12 / 12	0	6	3	< 3 min
Ring members identified	False positives	Loops fully traced	Sleeper accounts flagged	Analyst review time

- All 6 loops traced with total dollar exposure per loop
 - Shared device fingerprints surfaced as corroborating evidence
 - 15 distractor accounts correctly cleared (zero false flags)
- 3 sleeper accounts flagged with behavioral drift timeline
 - Analyst reviews full case in under 3 minutes and acts with confidence
 - SAR auto-drafted and ready to file upon analyst approval

FRAUDETTECT AI

Agentic Fraud Intelligence Platform

PRODUCT BRIEF

For Crestline Community Bank — Fraud Team

COMMERCIAL MODEL — BUILT FOR COMMUNITY BANKS

The Market Opportunity

5,000+ community banks in the US cannot afford the enterprise fraud stacks that large institutions deploy. They rely on rules engines that have not meaningfully evolved in a decade.

Fraudetect AI is the first agentic fraud intelligence layer built for their scale and budget.

Deployed as a SaaS overlay on top of existing core banking systems — no rip-and-replace, no lengthy implementation, no infrastructure investment required.

Deployment Model

SaaS overlay
API integration
No core replacement
Go-live in days
Community bank pricing
